

# Classifying Animals

## Phylum Annelida

Annelids are also known as segmented worms. They are extremely variable in form and lifestyle and live in all ecosystems on Earth. Below, list four animals that belong to the phylum Annelida.

---

---

The name 'Polychaete' (pronounced 'polly-keet') comes from the Greek words "poly" and "chaeta". What do these names mean?

(poly) \_\_\_\_\_ + (chaeta) \_\_\_\_\_ = \_\_\_\_\_

Using the key below, label the features of the polychaete.

- KEY**
- Antenna
  - Chaetae
  - Eyes
  - Head
  - Parapodia
  - Tail
  - Trunk
